**OPPOSITION TO IMPOSITION OF A  
NEW HYDROLOGIC BASE PERIOD OF  
PRODUCTION SAFE YIELD  
CALCULATIONS BY NEWBERRY  
SPRINGS RECREATIONAL LAKES  
ASSOCIATION**

Hearing Information:

Date: 10/20/2025

Time: 8:30 AM

Dept: 1

Before the Hon. Craig G. Riemer, Judge

23  
24 NEWBERRY SPRINGS RECREATIONAL LAKES ASSOCIATION, hereinafter referred  
25 to as NEWBERRY, opposes the Motion for Determination Hydrologic Base Period for  
26 Production Safe Yield filed by the Mojave Water Agency on the following grounds:

27 1. An “across the board” determination of a new hydrologic based period is premature  
28

1 and could be a wasted effort, pending the completion of the Regional Mojave River Basin Model  
2 (RMRBM) .

3           2. Moving party has admitted in its pleadings that the RMRBM could result in the  
4 necessity of determining a different hydrologic period base period for the entire basin, and/or  
5 certain Subareas of the Basin (moving papers, page 6/Lines 18-23). This is particularly  
6 significant for the Baja Subarea which has demonstrated a reduction in water use and recovery of  
7 water wells.  
8

9           3. The request for an adoption of a new base period to take into account “Cultural  
10 Changes” unfairly prejudices the Baja Subarea as it does not take into effect the reduction of  
11 agricultural uses, retiring of water rights, and the recovery of water wells, while most other  
12 subareas have experienced significant growth.  
13

14           4. The proposed new hydrologic base period rewards water users and penalizes the Baja  
15 Subarea by nearly Thirty Percent (30%) before the essential determination of whether or not the  
16 “modeled water flow” is actually flowing to the Baja Subarea. NEWBERRY on behalf of Baja  
17 has been fighting to establish that it is receiving the water actually estimated pursuant to the  
18 judgment. To further penalize the area by reducing its production safe yield calculation by  
19 nearly thirty percent (30%) is grossly inequitable, does not represent sound management of the  
20 basin, but favors upstream users and Subareas, and potentially constitutes a taking of land,  
21 income, quiet enjoyment of real property, and destroys the quality of life of the inhabitants of the  
22 Baja Subarea.  
23

24  
25 **FACTUAL DATA AND ARGUMENT**

26           NEWBERRY, for the past six or more years has been fighting for the Baja Subarea. It  
27 has engaged experts who are familiar with River and the River Basin, and which experts have  
28

1 presented substantial data demonstrating that the Baja Subarea has been denied its projected  
2 water flow. The residents of Baja have purchased water rights, have seen retired water rights  
3 and reduced agricultural production, all resulting in the objective finding of the recovering of  
4 many water wells. None of these factors are considered in the analysis of this new hydrologic  
5 base period.  
6

7 Finally, the RMRBM is being prepared to lend credence to what is actually occurring as the  
8 water that exits the Transition Zone from the Alto subarea and actually flows to the Centro  
9 Subarea. Without the benefit of the completed RMRBM, the Mojave Water Agency, in its  
10 technical Watermaster capacity, continues to estimate or guess Production Safe Yield numbers.  
11

12 The Baja Subarea is at the “end of the chain”, and while the more populated, developed  
13 and economically growing areas of Alto and Centro may not be worried if the Baja Subarea is  
14 provided with adequate water, the citizens, residents and inhabitants of the Baja Subarea,  
15 particularly NEWBERRY’s residents, have spent MILLIONS OF DOLLARS in conservation,  
16 water replacement, water purchases, expert technical advice and legal fees, all to maintain their  
17 homes and quality of life. All requests for help are deferred or denied by the Mojave Water  
18 Agency, as not economically feasible. Period. Despite this response, the Baja area residents  
19 persevered and finally the recovery of many of the wells was recognized by the Watermaster and  
20 the Courts earlier this year.  
21

22  
23 NEWBERRY submits the proffered new Hydrologic Base Period of 2001 to 2020 not be  
24 applied to the Baja Subarea for the reasons set forth in the attached expert declaration of William  
25 Laton, PE, attached hereto as Exhibit One, which are incorporated by reference herein as if set  
26 forth at length, which provides the technical analysis of opposition set forth above.  
27

28 ///

1 **CONCLUSION**

2           Based upon the argument and expert evidence set forth above, NEWBERRY respectfully  
3 requests that any decision of the Court with respect to this motion, exempt the Baja Subarea  
4 from any new base hydrologic period, pending completion, review and approval of the RMRBM.

15 a licensed Professional Hydrogeologist in both California and Washington. I am a Certified Professional  
16 Geologist with the American Institute of Professional Geologists and a Certified Professional Geologist for  
17 the European Union.

18  
19 4. I am a Professor of Hydrogeology in the Department of Geological Sciences at California  
20 State University, Fullerton, California. This career continuation includes years of teaching, consulting,  
21 litigation support, and management experience. My course topics encompass hydrogeology, water quality,  
22 environmental sampling, groundwater modeling, well hydraulics, remediation technologies,  
23 RCRA/CERCLA compliance, meteorology, oceanography, geology, drilling and well construction, field

28 models and geological and hydrogeological mapping. My work was under specific assignments and

1 projects, resulting in reports, most of which were grant-funded and related solely to the specific purpose of  
2 the study. Additional work was performed by the Agency to determine the groundwater flow between  
3 basins and what, if any, changes had taken place at the time of the studies. This overall research resulted  
4 in no less than 16 public reports, 18+ presentations, and 12+ theses. Consulting efforts have included the  
5 evaluation of blowing sand, mountain-front recharge, and surface flow, as well as specific site evaluations  
6 for water resource supply.

7 6. I have been asked and retained by Newberry Springs Recreational Lake Association  
8 (NSRLA) for the purpose of providing opinions (recommendations) on the following issues affecting the  
9 Alto Transition Zone, Centro, and Baja sub-area.  
10

11  
12 **Rebuttal of Mojave Water Agency's Motion for Hydrologic Base Period**

13 7. The motion by the Mojave Water Agency (MWA) to change the hydrologic base period  
14 for Production Safe Yield (PSY) calculations in the Mojave Basin Area from 1931-1990 to 2001-2020  
15 should not be implemented on any recalculation in the Baja Sub-Basin. These calculations will affect the  
16 estimate of the amount of surface water that flows into the Basins, which are used in calculating PSY.

17 **Exhibit 1:** Surface Flows recorded at active and historic stream gages since 1909. The proposed new base  
18 period is inappropriate because it doesn't account for recent increases in sub-basin groundwater levels, fails  
19 to consider the impact of water rights transfers that have reduced overall groundwater production, and relies  
20 on an insufficient amount of data from several new river gages. Additionally, it would be prudent to wait  
21 for the completion of the Regional Mojave River Basin Model (RMRBM), which the Watermaster's own  
22 motion acknowledges may provide a better understanding of the hydrogeological conditions. Since the  
23 Baja Sub-Basin is the most downstream of the adjudicated sub-basins that the MWA manages, any potential  
24 implementation of these new calculations would affect the Baja Sub-Basin more than any of the other sub-  
25 basins, since any miscalculation in the upper sub-basins would propagate downstream. See **Exhibit 2,**  
26 shows the effect on Baja with the proposed base periods for all Sub-Basins. The change would affect Baja'  
27  
28

1 PSY by the greatest percentage, the change would reduce the PSY by 28.95% while the other basins would  
2 have changes to their PSY ranging for a decrease of 3.43 % to an increase of 71.90%.

3 8. The motion fails to consider the current state of groundwater levels within the Baja sub-  
4 basin, which have been increasing. **Exhibit 3** shows groundwater has been increasing in numerous  
5 monitoring wells in the Baja Sub-Basin beginning around 2020. This rise in groundwater levels within the  
6 sub-basin should be a crucial factor in determining the appropriate base period for PSY calculations, as it  
7 is an actual, verifiable data point of the basin's conditions. The purpose of calculating PSY is to provide an  
8 estimate of the mean annual amount of groundwater that can be pumped without causing a long-term net  
9 change in the amount of groundwater in storage. If groundwater levels are already on the rise, based on the  
10 previously established base period, implanting a new base period, that is based on a period of relative  
11 dryness may not accurately reflect the current hydrologic conditions, potentially leading to an unnecessarily  
12 restrictive PSY calculation. The Water Master proposal doesn't reflect the current increasing trend in  
13 groundwater levels, making it an unsuitable choice.

14  
15 9. A significant factor not addressed in the motion is the purchase of water rights associated  
16 with inter-sub-basin pivot irrigation. The motion does mention that an appropriate hydrologic base period  
17 should include "*recent cultural conditions*" such as "*patterns of groundwater production, consumptive uses,*  
18 *and other relevant factors*". By acquiring these water rights, some of the largest water users in the sub-  
19 basin have had their pumping rights reduced or eliminated. In October of 2019, the MWA purchased 7,194  
20 AF of water rights from the Genon Corporation; these rights are no longer being pumped. Additionally,  
21 the Newberry Spring Lake Association has purchased an additional 4,335 AF of water. This major change  
22 in "*groundwater production*" and "*consumptive use*" is a recent cultural condition that the proposed 2001-  
23 2020 base period does not adequately reflect. The acquisition of these rights by the Lake association has  
24 resulted in a decrease in water extraction, as water usage by eliminating producing farms leads to less water  
25 being extracted from the basin, since the Lake's water production is set. It would be inaccurate to use a  
26 historical base period that doesn't account for this fundamental shift in water usage. Major solar farms have  
27 replaced sixteen 160-acre pivots on the west side of the Calico fault; this represents a significant cultural  
28

1 shift in the area, as solar energy uses no water. The motion itself states that PSY calculations must be based  
2 on a period that includes “*given patterns of production, applied water, return flows and Consumptive Use*”.  
3 The proposed base period is not representative of these new, lower production levels.

4 10. The motion’s claim that the proposed base period is representative of the long-term natural  
5 water supply is questionable because it relies on data that are not located at the sub-basin boundaries. There  
6 have been additional newly installed Mojave River stream gages that have only been collecting data for the  
7 last “*two years*”. The data from these stream gages is insufficient to draw conclusions about long-term  
8 hydrologic conditions. However, the motion refers to “*Exhibit 2,*” which charts Mojave River flow at the  
9 Forks from 1931-2024, but fails to mention that the most recent data points are based on these new gages  
10 or the Barstow gage, which is currently used to estimate surface inflow to the Baja Sub-Basin. It is essential  
11 to postpone any changes until more data is collected to ensure an accurate and reliable evaluation of the  
12 actual flows into the Baja Sub-Basin.  
13

14 11. The Watermaster’s own motion provides a strong argument for delaying the recalculation.  
15 The motion states that the MWA is currently developing the Regional Mojave River Basin Model  
16 (RMRBM). The motion also notes that once the model is “*completed and calibrated,*” it “*may suggest a*  
17 *different hydrologic base period for the entire Basin, or even for certain Subareas of the Basin*”. It is  
18 prudent to wait for the completion and release of this regional model, as it will provide a more  
19 comprehensive and sophisticated understanding of the various sub-basin hydrogeological regimes. Making  
20 a change to the base period now, only to potentially change it again soon based on the RMRBM, would be  
21 inefficient and create unnecessary instability in the overall water management process. The RMRBM is  
22 designed to provide the kind of detailed information necessary for a sound determination of the hydrologic  
23 base period for each sub-basin.

### **TEACHING PHILOSOPHY**

As a professor, I aim to provide students with practical experience essential for building a successful career. In addition to providing the “*nuts and bolts*” of a subject, I encourage students to apply traditional knowledge to innovative approaches through applied research and hands-on experience. I aspire to motivate students by fostering participation in unique learning opportunities, many provided by local companies, agencies, and vendors willing to share their services and expertise.

Through private and government grants and contracts, I can provide multiple funding opportunities to my students, allowing them the means to spend more time on their academic studies and providing experience through field-related projects. My main research focus is groundwater hydrology and hydrogeology of arid environments. Most of my students directly participate in this research and can obtain either bachelor’ or master’s degrees through individual projects for which they are responsible.

I encourage my students to actively participate in professional organizations to build strategic partnerships and create a broad-reaching network of individuals and indispensable resources. Further, I encourage students to present abstracts and posters at local and national conferences and to publish their research as much as possible to stimulate educated discussions with their peers and accomplished professionals.

The best way to measure the effectiveness of my objectives and judge my goals is to elicit student feedback and evaluation. My students consistently rate me very high in their end-of-semester assessments. My biggest reward as a teacher is a lasting professional and personal relationship with my students. I enjoy working with and supporting students through their academic careers and feel honored when they graduate with a professional degree.
